Wager Watch

# Introduction:

Team Awesome:

Alex Kaiser: API, Backend, AWS

Caleb Jordan: Bets page design, History page design

Alex Cersosimo: History page design, Navbar, Bootstrap

Svens Daukss: Homepage design, Models

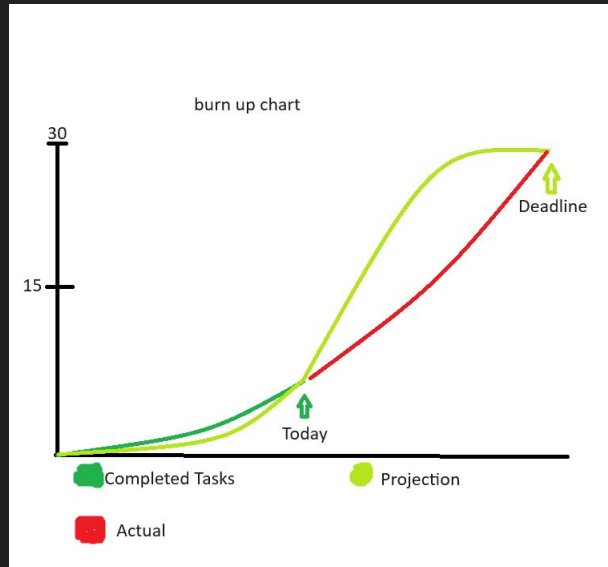

What it does...

Web application built on the ASP.NET framework, allowing users to create accounts seamlessly. It incorporates Amazon DynamoDB as the database backend, ensuring efficient storage and retrieval of user information. The application's core functionality centers around tracking sports bets, providing users with a platform to log and monitor their betting activities.

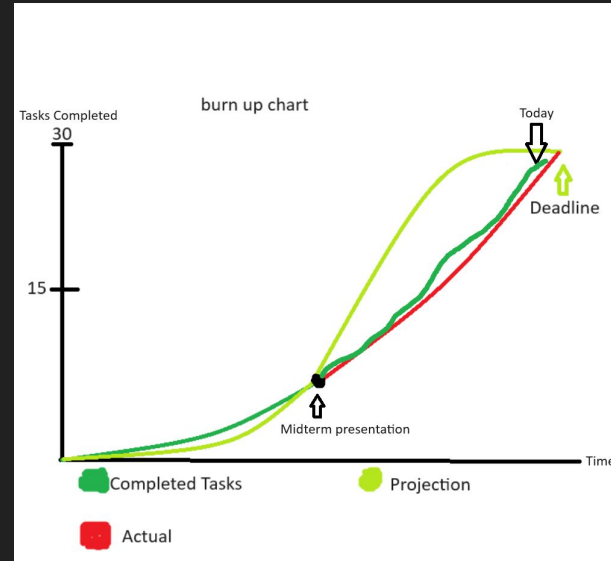

# Project Time Goals:

## Midterm Presentation

## Current Status

# Progress report

What's changed since the midterm: View pages/home page overhaul

Project deadlines: Hit sooner than expected.

Future implementations: -Sociability, Fantasy Leagues

Demonstration...

# Wager Watch
